

MS-273
Web Design Basics
Assignment #2
Text Formatting

Date: April 3, 2003

Due: April 14, 2003

Demonstrate how hypertext links can be added to any HTML document to make it “browse-able” to the viewer. Add whatever links you wish to your document from assignment 1. Upon successfully adding links to your document, add three frames to your document to present the layout of your page as shown below. For simplicity, you’ll want to do this by dividing each frame’s contents into a separate file. Finally, once the page is successfully laid out in frames, add an HTML table to the contents of your page. Be creative and use whatever data you wish to describe in the table.

As before, do not hand in your work, but simply post it to your web directory on the MSOE server so that anyone can view it’s contents.
