

MS-273
Web Design Basics
Assignment #4
JavaScript

Date: May 1, 2003

Due: May 15, 2003

The purpose of this assignment is to demonstrate your knowledge of JavaScript by adding JavaScript elements to your already existing web pages. The type of JavaScript code you select to demonstrate is up to you. Some ideas include using “alert” boxes or other “dialogs” or “widgets” for user input; using some of the built-in objects, such as Date or Math; using the Frame or Form objects to control layout behaviors or validate input from a user; using browser behaviors to make the experience more interesting for your visitors; etc.
