

MS-3804
Advanced Java Program #1
Graphics, Builds

Date Assigned: **Thursday, March 16, 2006**

Date Due: **Thursday, March 30, 2006**

Use the Blackjack graphical user interface game described in class to implement a Casino War game. The game of “war” is a simple wagering game that is much simpler than Blackjack. It is played between two players (the dealer and the player) and whoever draws the higher card wins the bet. There are no ties in the game, since the suits are ordered: Diamonds, Hearts, Clubs, Spades.

Build your code using Apache Ant (just as we did with the Blackjack program) to be run from an executable .jar file.
