

MS-3804
Advanced Java Program #2
Graphics, Builds

Date Assigned: **Thursday, April 13, 2006**
Date Due: **Thursday, April 27, 2006**

In class we demonstrated how to use Ant, JUnit and JUnitDoclet to generate an application and its associated unit testing framework. We also developed a small application (named MySQLBean) to access a MySQL database from a Java application, and process the Result Set that the Bean returns. The objective of this assignment is to put these two projects together:

Develop a unit testing application, using the JUnit test suite framework, to test all of the functionality provided in the MySQLBean and DBResults utility classes. All of the code we developed and covered so far have been posted to our course web page (www.msoe.edu/~blessing/ms3804). Demonstrate in class your unit tests.
