

MS-395
JavaScript Program #2
Dates, Forms and Tables

Date Assigned: **Wednesday, April 4, 2007**
Date Due: **Friday, April 20, 2007**

The purpose of this assignment is to demonstrate basic understanding of JavaScript programming using control statements, objects and HTML. The objective is to produce a monthly calendar using HTML and JavaScript logic. The JavaScript program should prompt the user for the year (4 digits), month (1-12) and date (1-31; depending on the month) and output a table that shows the monthly calendar for the specified date. For example:

Year:

Month:

Day:

The form above would produce the following table output:

January, 2006

Sun	Mon	Tue	Wed	Thu	Fri	Sat
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31				

As usual, when you are satisfied with your program output, email your well-commented '*.js.html' file to blessing@msoe.edu as an email attachment by the due date above.
