

At the beginning of this course, a number of course objectives were identified. Please give your assessment of your own success in meeting each of these objectives and of the value of the course in helping you to meet them. Please use a scale of 1 (not successful at all) to 5 (very successful) for each rating. Note that this assessment is intended to be a process improvement measure, and will NOT be used in assigning a course grade.

<b>Course objectives: On successful completion of this course, the student will:</b>	<b>Assessment of your success in meeting this goal</b>	<b>Assessment of course as assisting you in this goal</b>
understand operating system process management		
understand concurrent processes and synchronization techniques		
understand operating system memory management		
understand input/output handling in operating systems		
understand file system interfaces and implementation		
understand and be able to apply UNIX system calls		
be able to design and implement a simple real-time operating system		
be able to enhance and extend an existing software system		
be able to perform independent research on a focused technical topic		
be able to document research results in a technical paper		
be able to communicate research results in a brief oral presentation		

Please add any comments or suggestions you have regarding the course objectives, your experience in the course, and the role of the course in helping you to meet the objectives. Thank you.
